

SCANNER WITH HANDWRITTEN ANNOTATION**ABSTRACT OF THE DISCLOSURE**

The present invention is directed to an image data capture device for editing captured image data, the device generally including at least one image data capture element, an image data processor for generating image files from image data acquired by the capture element, and a user data entry device for enabling a user to modify image files. Preferably, one or more image data capture elements, the image data processor, and the user data entry device are disposed within a portable container.
